OVERVIEW

Operations Dashboard

The Staff ERP Portal is the administrative hub of Envirotech. It gives technicians, pre-sales specialists, and system administrators full overview of pending client activities, SLA due dates, active customer databases, and real-time helpdesks.

FIGURE 1.1: STAFF ERP KEY PERFORMANCE INDICATOR BRIEFING PANEL

 Key Metrics Explained

The KPI dashboard provides real-time operations status:

- **SLA Due Today:** Highlights maintenance and calibration certificates that expire today and must be processed immediately.
- **SLA Breaches:** Indicates overdue calibrations requiring supervisor escalations.
- **Pending Approvals:** Highlights active calibration/sales orders submitted by customers that are waiting for review.

SECTION 01

Sales Verification & Mandatory Serial Number Policy

Processing inquiries and converting leads into completed sales requires strict adherence to corporate serial registration procedures.

1

Review Inbound Inquiries

Technicians review customer-submitted Calibration or Sales inquiries in the Pipeline:

- Check attachments, photos of broken equipment, or specification requirements.
- Match contact names and phone numbers.

2

Strict Serial Registration Rule

When converting an inquiry into an active Sales Order:

- The system strictly requires inputting a unique ****Instrument Serial Number****.
- **You cannot sell or dispatch any product without logging its official serial number!** This ensures tracking for future calibration schedules.

3

Logistics Dispatching

Once verified, ship and record logistics coordinates:

- Input dispatch shipping invoice details.
- The system automatically populates the customer's asset database and starts the tracking ticker.

4

Auto Expirations Calculation

Upon registration of shipping details:

- The platform automatically schedules AMC/Calibration reminder thresholds (expiring in 365 days) and maps active warranty lifecycles.

SECTION 02

Client Registry & Proactive Support Desks

The Client Repository bridges client order histories directly to active real-time communication modules.

1

Client Database Management

Access the **Clients Repository** on the sidebar to check active accounts:

- Search by name, company, or phone number.
- Filter results by Buyers vs. Leads.
- Expand a client card to view full histories, purchased instruments, and addresses.

2

Proactive Chat Initiation

Instead of waiting for clients to query, staff can launch proactive desking:

- Click the blue ****Chat**** icon inside a client's profile card (Figure 2.1).
- The system instantly redirects you to that customer's secure chat session.

SECTION 03

Pre-Sales Lead Management & Contact Triage

Manage and nurture prospective clients systematically before they register as formal buyers.

1

Add New Prospects

Log outbound leads, warm contacts, or email enquiries:

- Click ****Add Client Card**** in the Client Registry.
- Assign initial contact tag: ****Lead****.
- Record target product interests (e.g. pH Calibrators, Gas Analyzers).

2

Status Tagging

Triage pipeline listings using status chips:

- **Lead:** Warm contact; inquiry pending.
- **Buyer:** Confirmed purchase; serial mapped.
- **Registered:** Formally authenticated online client portal account.

SECTION 04

Sold Assets Ledger & Warranty Management

Maintain complete oversight of active Envirotech instrumentation out in the field.

1

Serial Number Search

If a customer requests support on a specific unit:

- Go to the ****Sold Assets**** ledger page.
- Search by unique ****Serial Number**** to instantly identify model type, purchased date, and active warranty terms.

2

Warranty Audits

Update or audit warranty terms manually:

- Select an asset card and edit shipping details.
- Adjust warranty periods if an extended service agreement has been executed.

SECTION 05

Shipping & Logistics Dispatch Desk

Track cargo shipments and configure client delivery parameters.

1

Configure Courier Coordinates

When dispatching physical units:

- Navigate to the ****Dispatch Desk**** module.
- Log Courier Partner (e.g., DHL, FedEx) and input Cargo Waybill/Tracking URLs.
- This automatically shares shipping details with the client's portal!

2

Calibration Scheduling

Trigger pre-calibration verification checks before shipping:

- Verify physical calibration cards.
- Schedule the unit's subsequent calibration due date (calculated exactly 365 days from delivery).

SECTION 06

Active Support Inbox Management

Managing support chat desking with active customer profile name rendering.

**1**

Real-Time Name Mapping

The support inbox resolves client IDs to real names instantly:

- The screen header dynamically maps the client's actual company name (e.g. Manav NAGPAL, Figure 3.1).
- This eliminates generic "Customer" labels and allows customized desking.

Local Device Timestamping

Timestamps render instantly without lag:

- Message bubbles show exact times in your local time zone immediately upon sending.
- Sleek, dark slate-gradient panels provide a high-contrast layout reducing eye-strain during extended support shifts.

SECTION 07

Operations Floating Widgets & Action Tickers

Monitor critical helpdesk queues using live, interactive on-screen tickers.

1

Floating Support Indicator

A floating chat indicator bubble persists on the dashboard:

- Displays active counters for unread messages.
- Clicking the floating bubble opens the ****Support Inbox**** instantly from any administrative page.

2

Urgent Task Tickers

High priority reminders blink red on the dashboard task list, reminding technicians of SLA breachers that require direct email triggers.
